

New technologies for total health, increased awareness, and preservation of the environment

Electro-smog, building harmonization, water revitalization and improved air quality

Following a magazine interview, and subsequent publication in various other magazines, we have summarized the most relevant information in this flyer. The simple explanations and descriptions given by the company's founder and patron, Hans Seelhofer, present the details in a particularly interesting and easily understandable form, and we pass them on to you in his own words.

GL: Tell us something about yourself, and how you came to be involved in your research work

HS: I started out as an agricultural engineer – after training at technical college, I spent four years working in the dairy industry. From 1980 to 1984 I had my first involvement in energy saving, in the field of solar energy, in heat-recuperation for refrigeration equipment. It was a good job, but I was not altogether happy. As my father owned a cheese factory and my older brother was studying at medical school, there was some pressure on me as the youngest to take over the running of the cheese factory – but I managed to avoid this by enrolling at agricultural college. This was not a very profound course, but it gave me a very broad-based education and a basic understanding of many topics, which I was then able to extend by means of my own in-depth study. This allowed me to move into the construction business, working with solar technology and heat recovery. But in my heart of hearts, it was still not what I was looking for.

GL: Did you have any idea of what field you wanted to work in?

HS: It took me thirty years to find that out. I had already had my first experience of astral travel when I was only nine years old – I was wide awake, but I could see my body lying in my bed; I had thoughts and feelings, and was in full control of my actions. Through this experience, I became aware of my true self in the spiritual realm.

When I returned into my body, I was not shocked, just a bit surprised. However, I suppressed this experience – and it was not until I was thirty-five that I realized how important it had been. From then on, I began searching consciously and looking for a possible way out of what I was doing at that time.

First I spent two and a half years as marketing manager for Schnitzer grain mills, building up a client base in Switzerland. Then I worked as vice-president for Vita-Sana in Breganzona – it was a useful year, in which I made many contacts and gained some experience of a medical company. After Vita-

Sana, I founded FOSTAC AG in 1989 – and this year we are celebrating our twentieth anniversary.

Working with light energy and fast particles

GL: What does the name FOSTAC mean?

HS: It's a combination of two Greek words: FOS means 'light' and TAC is short for 'tachyon'. We work with light energy and fast particles, tachyons. During the first three years, I was also working with precious stones, and in 1992 we received a specific task from the spiritual world. Now, regarding explanations in the fields of mathematics and nuclear physics, I want to say that, although I have learned a lot myself, in these fields I rely very much on the Russian physicist Dr. Igor Orzhelskyi. He comes originally from the Ukraine, and has worked with the Russian cosmonauts – it was his task, working with other physicists, to develop electronic systems that could be used in place of medication during space flights. They used laptops with systems that worked in a similar way to bioresonance, which made it possible to carry out diagnosis and apply therapeutic measures.

The electron – the connecting element between the worlds!

Through his extensive interdisciplinary work with specialists in IT, mathematics, nuclear physics, biology and geology, Dr. Orzhelskyi has acquired an enormous range of knowledge. The research of these scientists delved deep into nuclear physics, and during the 1980s they discovered that the important part of the atom is not the nucleus but the electron. It contains all the data about life – the electron is composed of a T-plus, a T-zero and a T-minus tachyon. With such a composition, the electron is a 'voyager between the worlds' – it absorbs energy from the cosmic source and carries it into the material world.

GL: Amongst other things, you produce devices to neutralize electro-smog. How is electro-smog created?

HS: An interference field is always created whenever electricity is generated, transmitted or consumed. In physical terms this field is divided into two parts, a static part (direct current) and a dynamic part (alterna-

ting current). Direct current (DC) has only a slight negative effect on our health, but alternating current (AC) is much more harmful. Depending on the frequency of its energy pulses, it can be sub-divided into low frequency and high frequency ranges. In the low frequency range we may distinguish further, between the electrical and the magnetic properties, but at high frequencies the magnetic and electrical properties merge together, creating electromagnetic fields that are mainly used for data transmission. However, digital-pulsed data transmission carries a high risk, and can have a very damaging influence on the nervous system.

Scientists know that there is a potential difference of about 200,000 volts in the earth's electrical field, between the ionosphere and the surface of the Earth. This produces a constant flow of electrical energy along the lines of the electrical field, from the ionosphere to the Earth, in the form of a continuous flow of electrons. The electrons themselves contain the biological information that makes life possible – and they have an anti-clockwise spin about their own axis. In reaction to this continuous flow of electrons along the field lines, a constant magnetic field with vertical field lines is created, which flows from the Earth to the ionosphere and has a clockwise spin.

If living organisms are subjected only to the kind of electromagnetic energy flow described above, they stay sound and healthy. It is very important to bear in mind that the spin on the electrons depends on the information that is stored in them. If this information is mainly biologically positive, the electron's spin is anti-clockwise.

Unfortunately, however, the electromagnetic fields generated by modern technology function in exactly the opposite direction – the electrons rotate clockwise about their own axes, and the magnetic field lines act in the anti-clockwise sense. This is contrary to nature – and it is precisely this effect that causes electro-smog. Energy flows through our bodies in the 'wrong' direction, and instead of supporting and protecting us, it causes degeneration. We refer to these fields as 'interference fields' – they are zones in which the naturally occurring sources of energy are negatively influenced by magnetic fields and radiation from modern technology.

GL: What are the most common causes of electro-smog?

HS: The worst culprits at the present time are mobile phone transmitters, their radiation can be very harmful. Other outdoor causes of interference include electrical substations, radio masts, radar, radio and TV aerials, high-voltage power lines, and overhead power lines for trains, buses and trams. As for the interior of buildings, interference is generated by domestic electrical cabling, mobile phones and wireless telephones, baby monitors, laptops, wireless LANs and the tiny radio transmitters in these devices.

GL: Are there any other kinds of radiation that can affect living tissue?

HS: Yes, there are also some natural sources of interference, the best known being watercourses. About 70%

of all watercourses are damaging to the health, they can cause such effects as tiredness, back pain, rheumatism and gout. Less well known, however, are the natural energy lines of the Hartmann grid (discovered by Dr. Ernst Hartmann) and the Curry net (after Dr. Manfred Curry), both of which cover the whole Earth in a regular grid pattern. Both these types of Earth radiation are harmful to living tissue, especially at the points where they intersect. The Hartmann grid causes such effects as muscular cramp, whilst the Curry net is also referred to by specialists as the 'cancer and rheumatism grid'. Even the ancient Romans knew that fault lines in rock formations could be harmful, they often cause headaches or hormonal disturbances; the most notorious fault line is the San Andreas Fault in California.

Possible disruptive zones in a home

GL: What can we do to counteract these effects?

HS: Using tachyon energy, we have succeeded in developing a technology that acts upon the direction of spin of the electrons, and thus completely harmonizes (or neutralizes) the interference fields. Wherever FOSTAC technology is applied (as it now is in well over 31,000 buildings), a kind of force field is created in which the natural energies of the Earth are focused. Natural life-force (or vitality) begins to flow, people and animals start to experience a great sense of well being and a marked improvement in health.

GL: Do children react differently to adults?

HS: Yes. Children are often more sensitive to disruptive interference of this kind. So, we introduced a new product into our range a few months ago, which gives excellent results – the ALPACA BEAR. It is a 100% natural product of alpaca fur, manufactured under Fair Trade conditions. When treated with the FOSTAC® technology it creates a loving but powerful energy field, in which one feels protected and secure. The chakras are kept open, and the flow of energy is stimulated, helping the child to go to sleep and

then to sleep soundly through the night – and this beneficial energy flow in turn enhances health and strengthens the immune system.

The tachyon energy field also helps to enhance the child's learning capability and level of discernment, and to promote development in general. Parents and child both feel the benefits of the tachyonized Alpaca Bear.

Our CE-certified Alpaca Bear is unique in all the world. It meets all the safety criteria of European Standards 88/37 and the Swiss Toys Regulation in terms of physical requirements, use of organic chemical compounds, flammability and radioactivity.

A device to harmonize electro-smog and increase the efficiency of electricity

GL: You have recently introduced a device, the FOSTAC MAXIMUS®, that not only harmonizes electro-smog but also helps to save electricity.

HS: Yes indeed. We have invested almost 1 million francs in our subsidiary FOSTAC Technologies AG, and we have already shipped a whole range of FOSTAC MAXIMUS® units. We identified what we had to do in order to provide the world with exactly the device that it needs in the present situation. By saving energy consumption, we can reduce carbon dioxide emissions and avoid the need to build new nuclear power stations.

The FOSTAC MAXIMUS® draws its energy from the permanent flow of electrons to Earth, which results from the potential difference between the ionosphere and the Earth.

The accumulators in the FOSTAC MAXIMUS® consist of a copper core, wrapped in a woven silicon dioxide (fibreglass) mat, which is then encased in a bromine-alloy boron silicate (glass) casing. The copper core of the accumulators is connected into the electrical circuit, and the accumulators then create a high-density tachyon field, which attracts electrons out of the natural energy field and directs them into the electrical circuit. This has the effect of changing the direction of spin of the electrons from clockwise to anti-clockwise, and the simultaneous injection of energy also produces a massive increase in the speed of spin, all of which produces a further sharp increase in the efficiency of the electricity. Our nuclear physicist has shown us how this works, and how we save electricity with our units.

We have learned how to program the material so as to erase all the negative information and then reprogram it to be 100% positive. This changes the spin of the electron, and it is able to accelerate up to its maximum spin. It can be expressed like this: normally we send only a partially-charged electron to (for example) an electric motor, where it is discharged and produces an electromagnetic reaction; but now we have changed the information, so that we send a full 100% charge, and it produces a different electromagnetic reaction. That is precisely what we achieve with the FOSTAC MAXIMUS® unit. Moreover, the unit includes boron-silicon, which can be very easily programmed to transmit health information. The programming enables the maximum amount of tachyons to be collected – it works like an aerial – and then the tachyons are transformed into electrons. It is a two-fold effect: firstly, we are able to transmit information, and then this results in acceleration of the electrons. This creates energy that not only has a positive effect on health, but also achieves its maximum possible efficiency.

A FOSTAC MAXIMUS® harmonizes the electrical and magnetic interference fields created by alternating current. The biologically negative effect of electro-smog is thus repolarized (= neutralized), so that human vitality is strengthened and invigorated. A further effect is a significant improvement in the quality of the climate, both in the home and at work.

GL: Is there any connection between this function and our consciousness? For instance, is it possible that doubt, like a negative frequency impulse, might impair the functioning of the unit?

HS: Yes – the more units that are installed, the greater will be the positive influence on people's awareness. Fifty-five per cent of the feedback from people who are using one of the units is positive; others report a change in the

atmosphere of the house but have not yet noticed any reduction in their electricity consumption. The morphogenetic field that has been described by Rupert Sheldrake is also involved in this; after all, every electrical device in the world functions by means of electrons, which hold certain specific information. All our FOSTAC MAXIMUS® units have exactly the same program.

GL: What about the practical side – how are these units installed?

HS: They are installed by an electrician, immediately downstream of the main fuses. In the last two years we have often seen a power saving of between 9% and 27%. However, some clients report that there is unusual harmony among their staff, that visitors feel a sense of well being, and that their business performance is significantly better, but that their energy consumption remains unchanged. Yes – a farmer told us that he was using 8% less electricity, but his cows were giving 15% more milk, although that might be due to the new cattle feed ...

GL: Do you sell via agents, or direct to the user?

HS: It differs from case to case. At the moment we have to send out a lot of information before the unit can be put into service. Our present task is to raise awareness – so therefore, we have started by setting up a training center and launching a range of products to tackle the problem of electro-smog. We have fitted more than 31,000 households with special products; word has spread, and we have gained credibility in certain circles, and so we can now launch further technologies in those circles.

GL: The latest addition to your range is called the FOSTAC AIRWELL. What does this unit do?

HS: The FOSTAC AIRWELL cleans the Earth's atmosphere, thus helping to restore the perfection of our planet.

The air that we breathe, along with its many components (oxygen, nitrogen, rare gases, water etc.) also contains information. With every breath that we take, we absorb

the information and energy that is stored in the air, along with homeopathic traces of radioactivity, for example. But air also contains many physical substances (such as fine dust particles) that impart negative information to living tissue. All this can lead to health problems for all species that live and breathe.

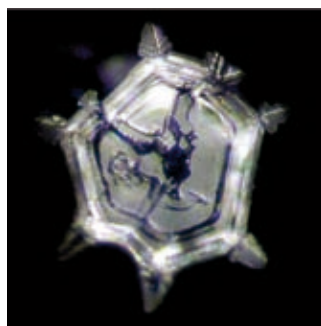

A single unit cleans the air significantly of all harmful substances over a space of about 750 m. Wherever FOSTAC AIRWELL is installed,

the field effect spreads out, and provided the units are spaced sufficiently close together, the fields connect and extend correspondingly.

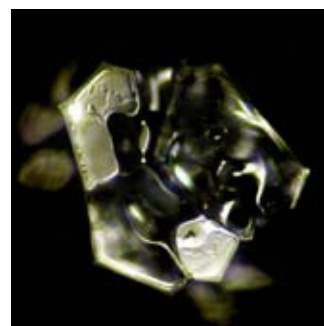

As a side effect, everyone who uses a FOSTAC AIRWELL benefits from the complete harmonization of their environment up to a radius of 20 m (harmonization of the effects of the Earth's magnetic field, watercourses and electro-smog), except for the effects of aggressive microwave radiation which require additional products.

GL: As we know, water is also a very good conductor. Can your technology be used to program it with positive properties, which could then transmit positive health-enhancing information?

HS: Definitely! We have been marketing products that revitalize and harmonize water for over twenty years, and this technology is now in use in more than 10,000 homes. At this point, let me show you some pictures of water crystals. In December 2008 Mr. Urs Huber, project manager of the WASSERBAU project in the Swiss canton of Lucerne, carried out an independent water test at Burgistein in the canton of Berne (see the first row of photographs). After the water samples were taken, our water revitalization device was fitted, and then another test was made just one day later (second row of photographs). In accordance with the procedure developed by Matsuro Emoto, the water droplets were frozen and then photographed under a microscope. The second set of photographs show the changes in the crystal structure. Well, I ask you, which water would you rather drink? With or without revitalization?

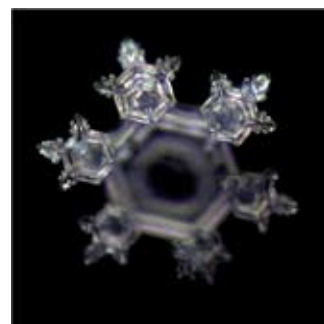

Picture 1: Water test without revitalizing using FOSTAC® technology

Picture 2: Water test without revitalizing using FOSTAC® technology

Picture 1: Water test one day after revitalizing with FOSTAC® technology

Picture 2: Water test one day after revitalizing with FOSTAC® technology

GL: In conclusion, can you briefly summarize the benefits of your products for end users?

HS: With pleasure. Our products will completely and reliably harmonize all interference fields due to electro-smog, watercourses, earth radiation and other disruptive influences. They replenish our energy reserves, enhance overall health in people and animals, protect the environment and conserve natural resources. In addition to this, some products can also reduce electricity bills and/or improve business performance as a result of the improved working environment. With other products we optimize the air quality by eliminating the negative influence of radon gas and reducing general air pollution. Finally, we can state openly, that for cost-effective revitalization of water, we are the market leader.

GL: Mr. Seelhofer, thank you very much for a most interesting discussion.
